

ADD SPEED, DURABILITY, PERFORMANCE AND PRODUCTIVITY WITH COATS LIFT ACCESSORIES

SPEED

Optional specialty accessories can reduce vehicle setup time. The 2 post optional "power station" provides access to frequently used sources of power and electrical. Premium HD jacking beams slide easier and have a faster set up time.

PERFORMANCE

Premium jacking beams with a five (5) year parts warranty lower operating costs and down time. Additional 2 Post height adapters and the extended column height option will expand the range of specialty vehicles being repaired.

DURABILITY

Optional stainless steel alignment radius plate and rear slip plates reduce corrosion damage and lower maintenance costs.

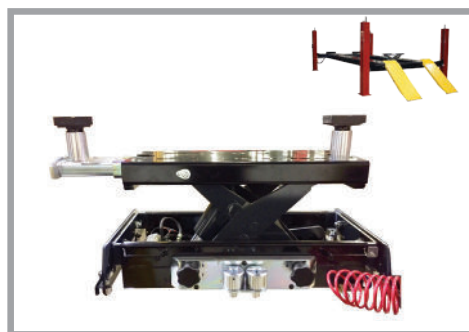

PRODUCTIVITY

Optional removable work steps provide an added work platform when working with any drive on style lift. Shatterproof LED lighting on the inside of the runways provides greater luminosity than hand held trouble lights. The lights can be set to come on and off automatically improving productivity.
